About Huawei

Huawei is a leading global provider of information and communications technology (ICT) infrastructure and smart devices. With integrated solutions across four key domains – telecom networks, IT, smart devices, and cloud services – we are committed to bringing digital to every person, home and organization for a fully connected, intelligent world. Huawei's end-to-end portfolio of products, solutions and services are both competitive and secure. Through open collaboration with ecosystem partners, we create lasting value for our customers, working to empower people, enrich home life, and inspire innovation in organizations of all shapes and sizes. At Huawei, innovation focuses on customer needs. We invest heavily in basic research, concentrating on technological breakthroughs that drive the world forward.

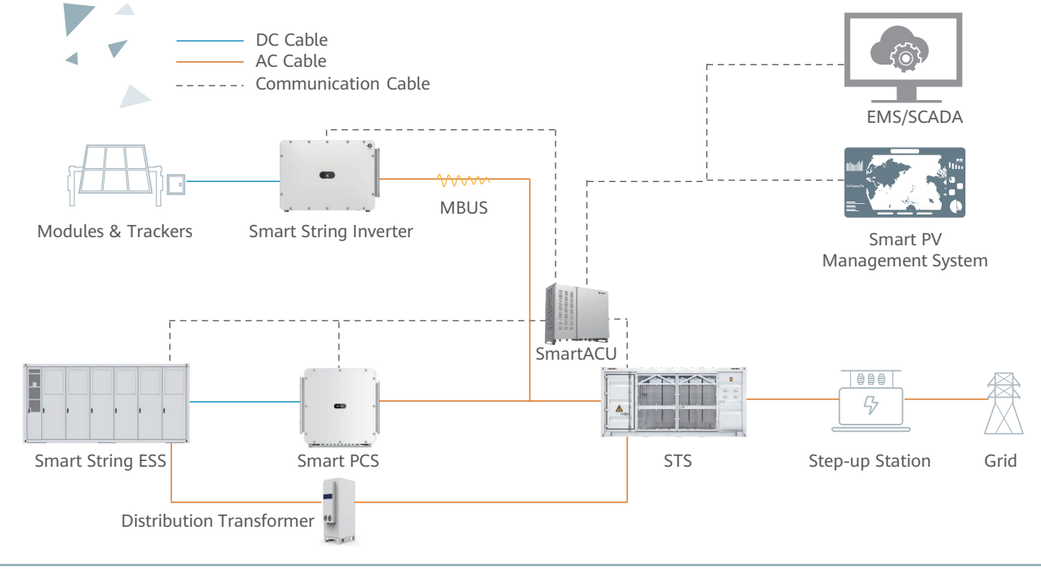
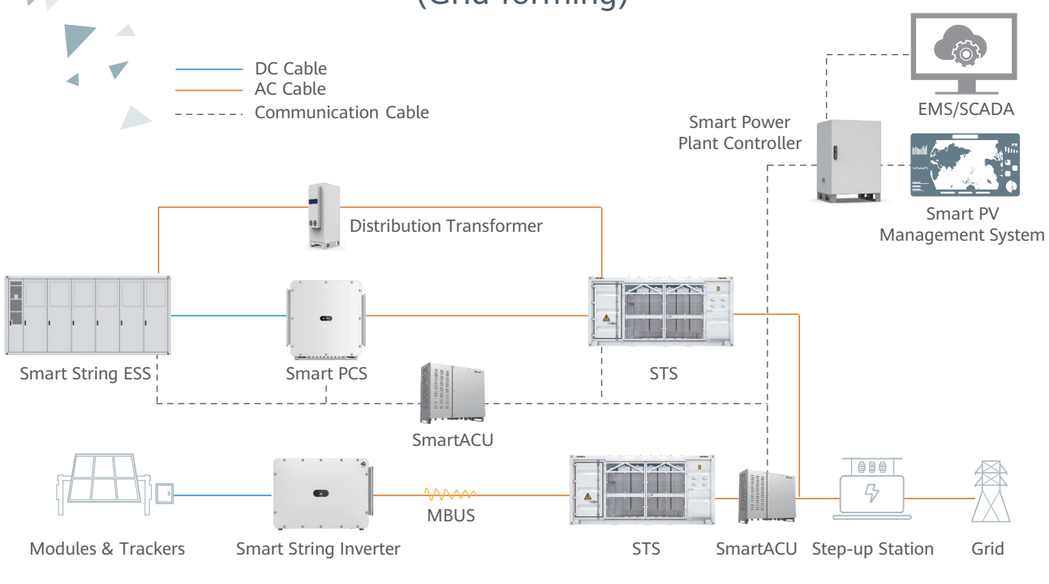
Low Voltage AC Coupling Solution



Medium Voltage AC Coupling Solution (Grid forming)



SUN2000-330KTL-H1

Smart String Inverter

For APAC, LATAM & EUROPE

- Max. Efficiency ≥ 99.0%
- Smart Connector-level Detection (SCLD)
- Smart Self-cleaning Fan (SSCF)
- IP66 Protection
- MBUS Supported
- Smart String-level Disconnection (SSLD)
- Smart IV Curve Diagnosis Supported
- Surge Arresters for DC & AC

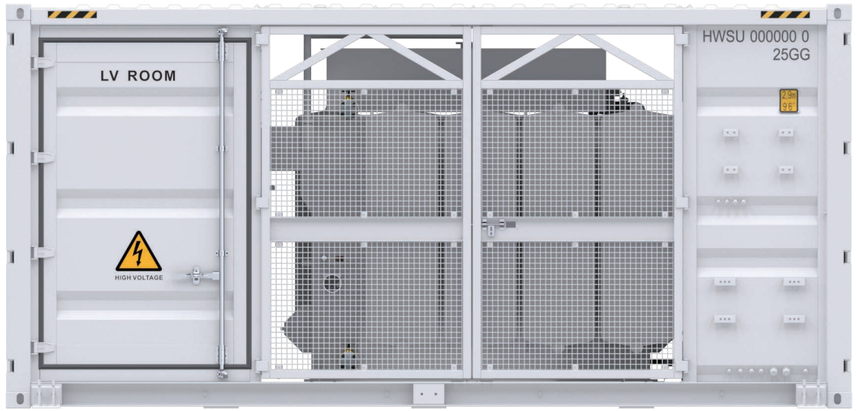
JUPITER-3000K-H1-GF

Smart Transformer Station

For EUROPE



Simple

Prefabricated and pre-tested,
no Internal cabling needed onsite
Compact 20’ HC container design for easy transportation

Efficient

High efficiency transformer for higher yields
Lower self-consumption for higher yields

Smart

Real-time detection of transformer,
LV panel and RMU high precision sensor
of LV electricity parameters
Remote control of ACB and MV circuit breaker

Reliable

Robust design against harsh environments optimal cooling
Design for high availability and easy O&M
Comprehensive tests from components, device to solution

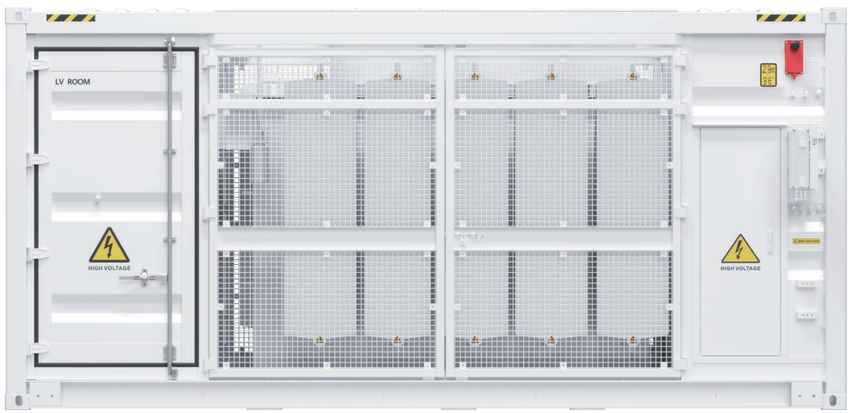
Smart Transformer Station



Simple

Prefabricated and pre-tested, no Internal cabling needed onsite Compact 20' HC container design for easy transportation

Efficient

High efficiency transformer for higher yields Lower self-consumption for higher yields

Safe

Meets IEC 61641, Up to Class C 1 arcing protection on LV side Update the function for MV protection, Change to Upward arc discharge, Meets IEC 62271-202 IAC-A

Smart

Real-time detection of transformer, LV panel and RMU high precision sensor of LV electricity parameters Remote control of ACB and MV circuit breaker

Reliable

Robust design against harsh environments optimal cooling Design for high availability and easy O&M Comprehensive tests from components, device to solution

Environmental protection

STS Can support natural ester vegetable oils Environmentally friendly, easy to degrade, 98% degradable in 28 days High flash point, > 350°C, not easily combusti-bleOil-free sump design, Simplify O&M

Smart PV Plant Management System

Main Functions

Function		Description
Refined management	Plant Overview	Provide an overview of the key information of the PV & ESS plant.
	Multi-level Refined Management	Provide multi-level fine management of plants, arrays, equipment, and components (strings, batteries)...
	Alarm Management	Alarms can be filtered, graded, and redefined; One-click direct access to the alarm center from any interface throughout the system.
	Remote Device Upgrade	Batch device upgrade through SmartPVMS(Plant) without going on-site.
Efficient O&M	Plant Diagnosis	Comprehensively evaluates plant performance and alarms, and analyze the loss.
	Power Normalization	Intelligently analyze plant and array operation efficiency and identify inefficient arrays.
	Discreteness Analysis	Inverter/string discreteness and deviation rate analysis, identifying inefficient strings; linked to Smart IV Curve Diagnosis automatically for further inspection.
	Smart IV Curve Diagnosis	Realize string-level fault localization, provide diagnosis report, O&M report, revenue estimation report, etc.
	Smart Tracker Control Algorithm (SDS)	Intelligent adjustment of the angle of the tracker to reduce shading and improve power generation efficiency
Open Eco-system		Data can transfer via northbound IEC104 and Restful API.

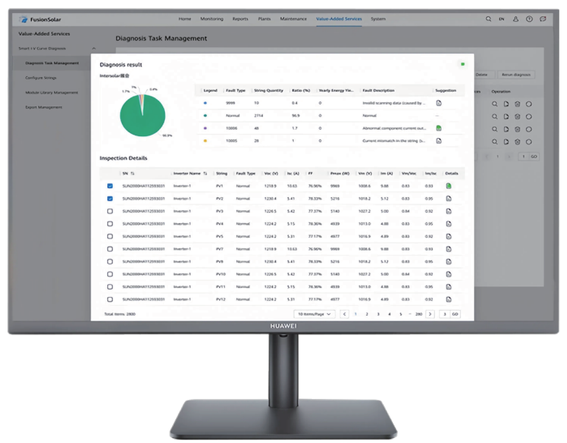
Smart I-V Curve Diagnosis

Smart I-V Curve Diagnosis is able to carry out online I-V curve analysis on entire strings with advanced diagnosis algorithm. The scanning would help to find out and identify the strings with low performance or malfunction, which would help to achieve proactive maintenance, higher O&M efficiency and lower operation cost.



Smart

- Support plant-level, array-level and inverter-level analysis and diagnosis
- Support scheduled scanning and proactive presentation of reports
- Automatically identify different failure types and provide recovery suggestion
- Support export of ROI estimation reports and assist in accurate O&M

Efficient

- One-click scanning without onsite experts or equipment
- SCompleting online I-V curve scanning on all strings
- Identification rate, recurrence rate, cause Identification accuracy > 95%

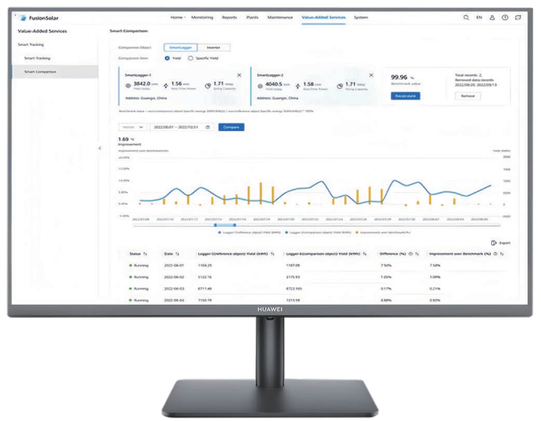
Smart Tracker Control Algorithm (SDS)

Smart Tracker Control Algorithm (SDS) is a valuable software based and closed-loop control. By using the SDS, together with Smart PVMS, SmartLogger and SUN2000 inverters, the trackers' angle can be automatically controlled and optimally adjusted to achieve higher yields. The yields can be increased by ~1% especially in complex terrain and weather scenarios, and it will bring higher revenue to the customer.



System level closed-loop control to keep the system operating in the state of maximum irradiation and optimal power output of PV module

Automatic tracking angle optimization and control by using AI technology, automatic sensing of shading and weather information. No need for additional sensing equipment, free from manual and empirical dependence

Comparison of Tracker Algorithms and Angles

Reverse-tracking stage in the morning and at dusk

Shadows in the front and back rows of modules, without consideration of complex terrain.	The SDS algorithm allows trackers to find the optimal angle for each, effectively avoiding shadow occlusions.
	Traditional Tracker Algorithm	Smart Tracker Control Algorithm

Cloudy and rainy days

Tracking the angle of the sun is not the best way to get maximum irradiation when without consideration that direct sunlight becomes diffuse reflection in this scenario.	Trackers are flattened at a small angle to receive more diffuse light, so as to get maximum irradiation.
